

## The Road Ahead: Caring for an Elderly Population

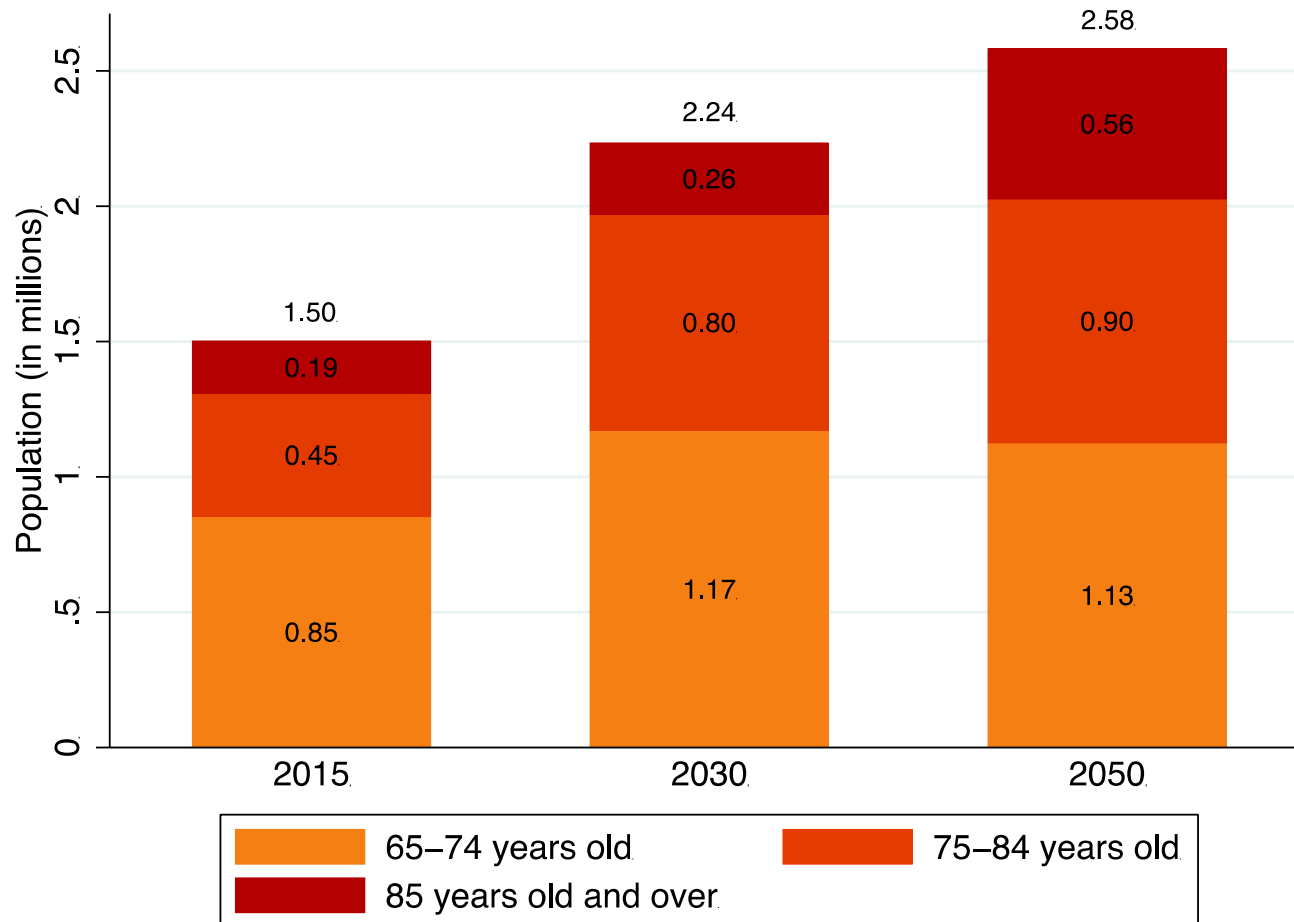

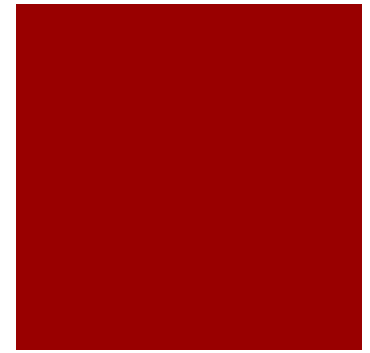

David Boisclair  
Researcher and Chair Coordinator  
ESG UQAM

# The Road Ahead

- We know a lot about projected numbers for the elderly population

# Important increase in number of oldest old (QC)

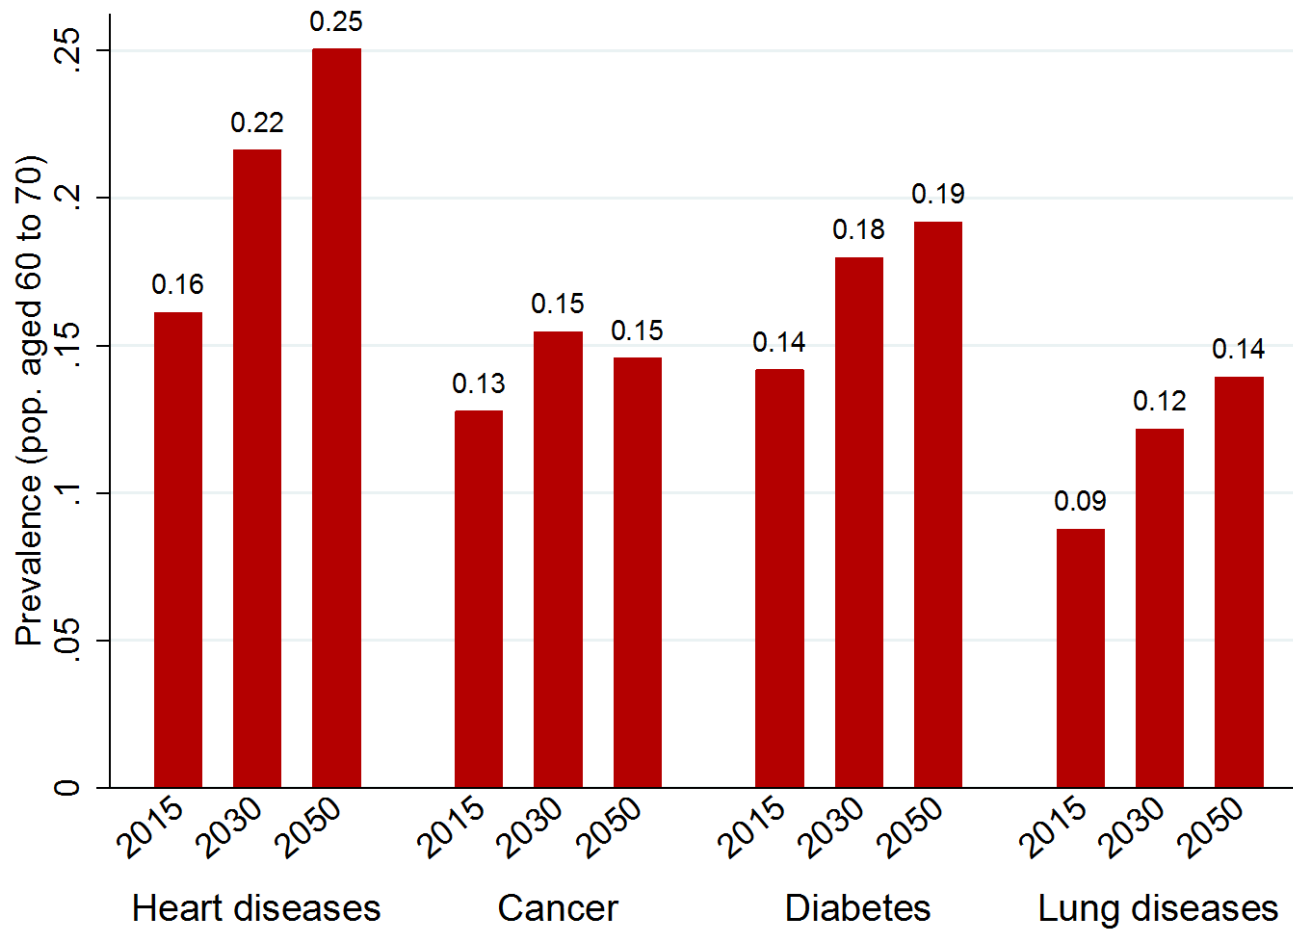

# The Road Ahead

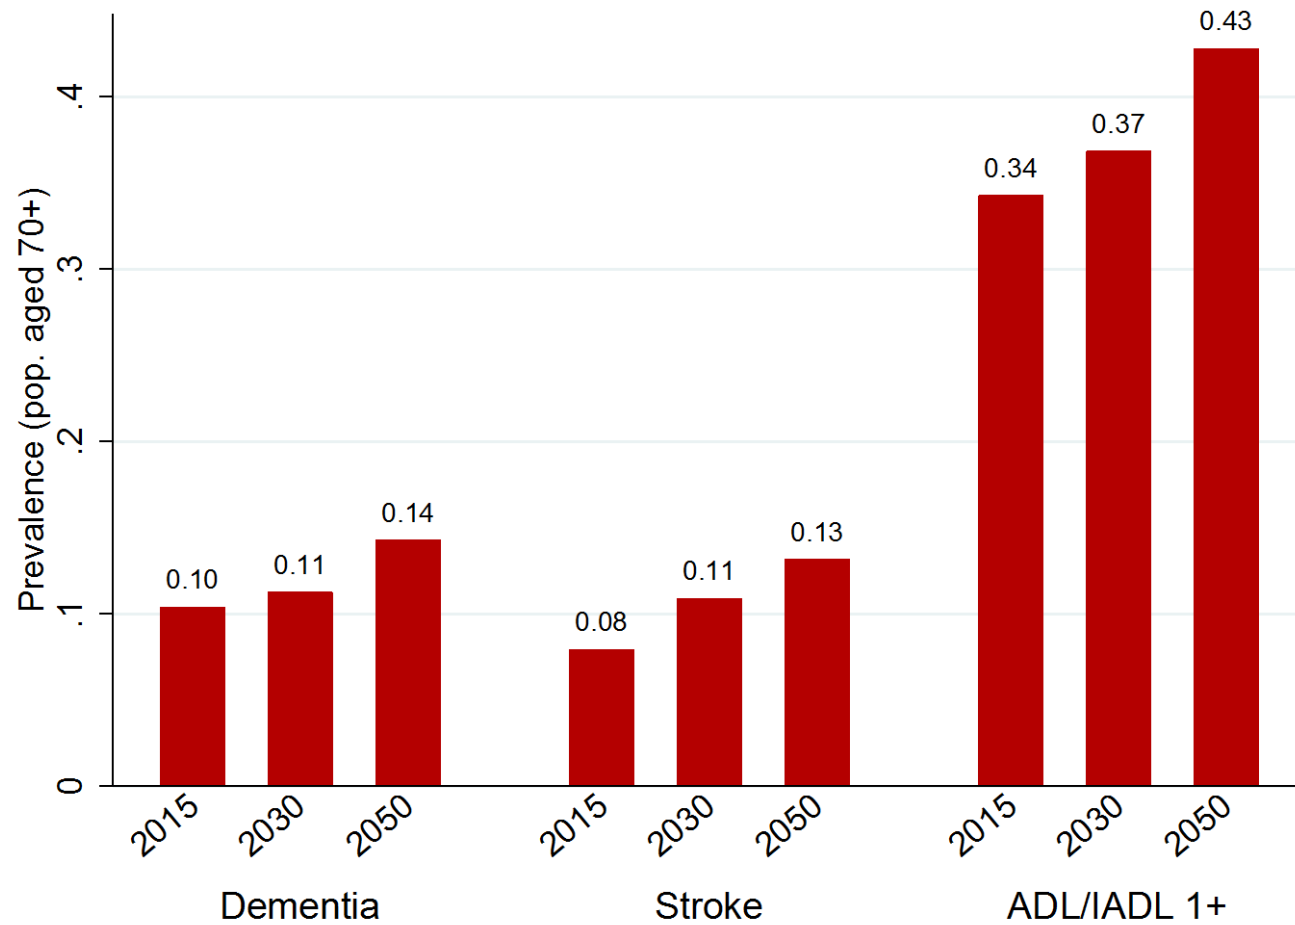

- We know a lot about projected numbers for the elderly population
- We know much less about the future needs of that population
  - ↑ for some health conditions and ↓ for others
  - ↑ improvements in technology (both to treat diseases and to modify the living environment)

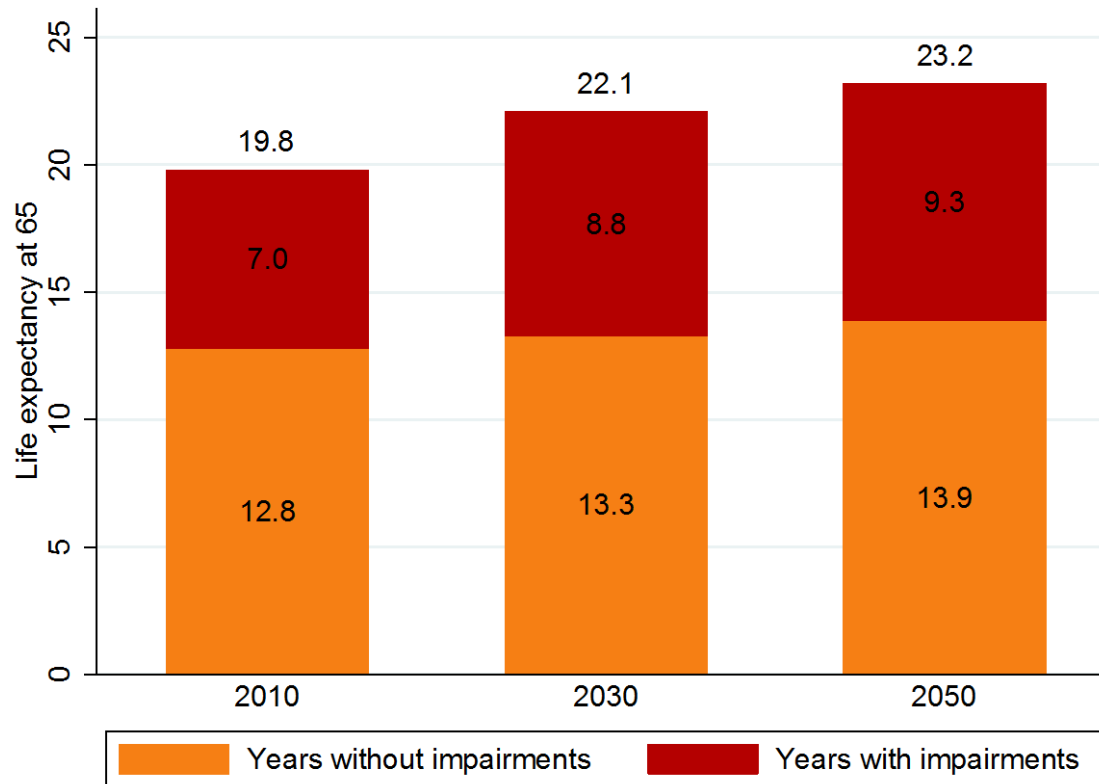

# Health at age 60-70

# Health at age 70+

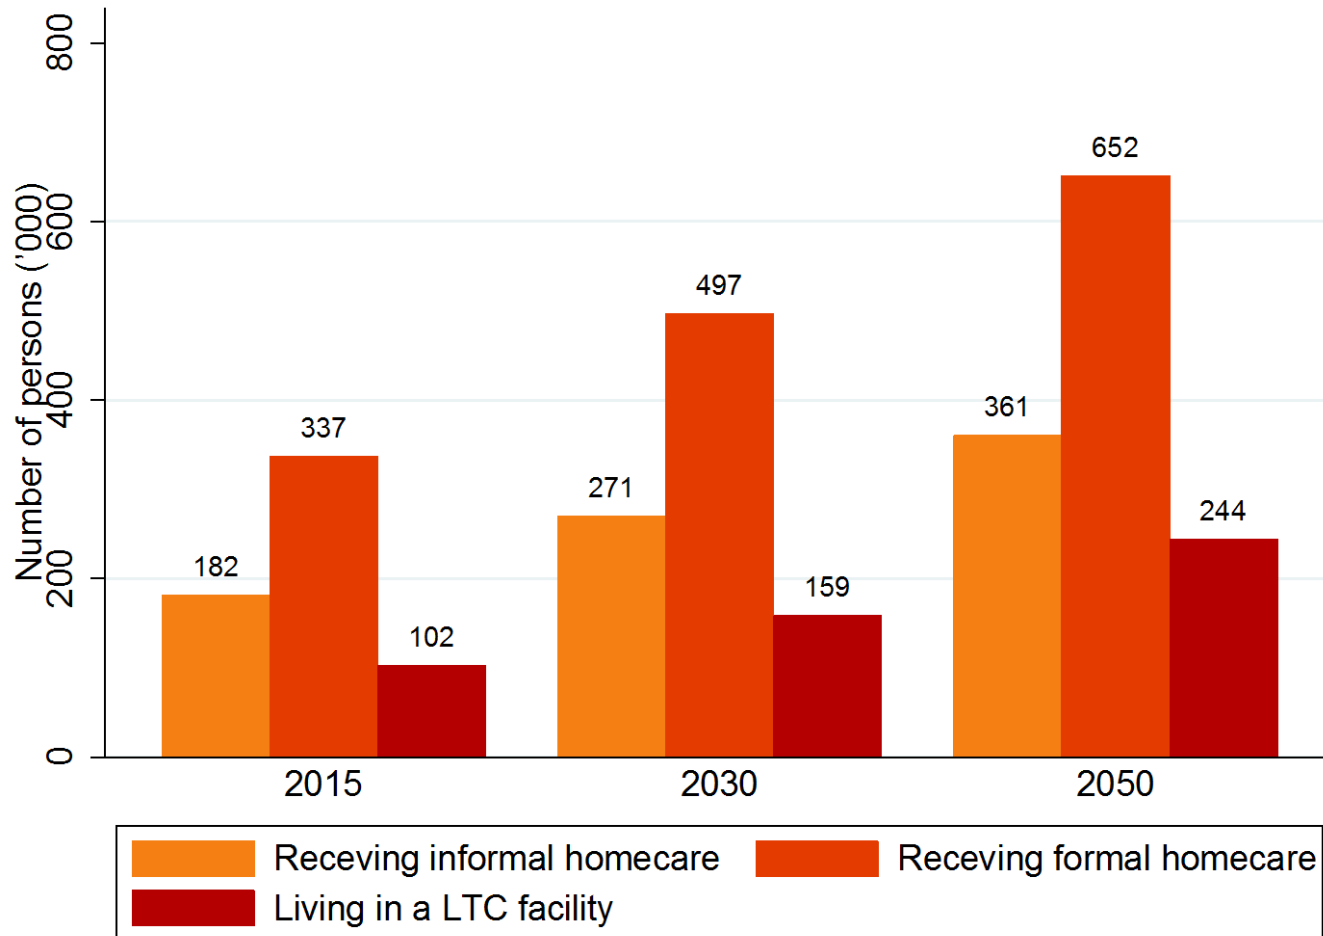

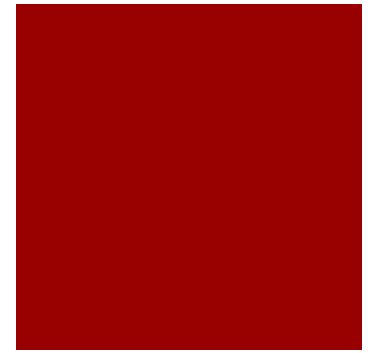

# Remaining life expectancy at age 65

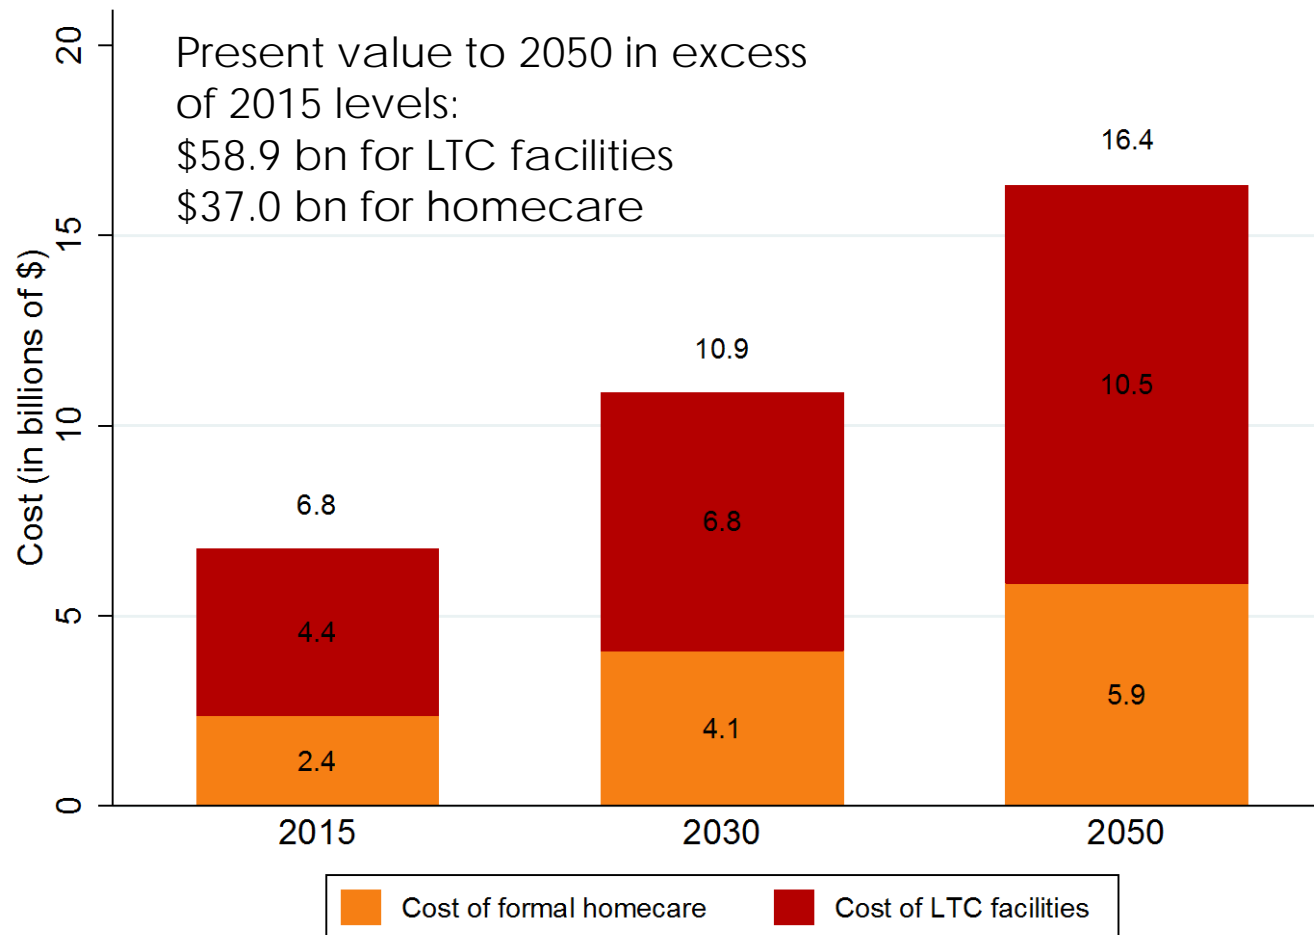

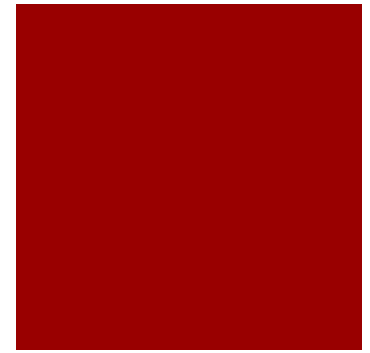

- *“With impairments” means needing help for at least one ADL or IADL or having a cognitive disorder.*

# Projected number of individuals receiving LTC

# Financial burden

# Conclusion

- The oldest old group will grow rapidly in coming decades
- Although they will live longer, unclear whether they will be in better health
- The fiscal and economic burden will be large in years to come
